

Module 1: Foundations of Generative AI & Prompting

- Introduction to LLMs, the Mechanics of LLMs.
- Prompts and Fundamentals of Prompt Engineering
- Model Configurations and Output Parameters (Temperature, Top-P, Tokens, etc.)
- Model Configurations and output Parameters tuning.

Module 2: Essential Prompting Strategies

- Shot Prompting
 - Zero-Shot Prompting
 - One-Shot Prompting
 - Few-Shot Prompting
- System Instruction Prompting (Role-playing and Persona setting)
- Delimiter Prompting (Structuring inputs for clarity)

Module 3: Advanced Reasoning & Logic Techniques

- Chain of Thought (CoT) Prompting
- Consistency Prompting
- Self-Consistency Prompting
- Plan and Solve Prompting

Module 4: Complex Workflows & System Optimization

- Chain of Draft (CoD) Prompting
- System 2 Attention (S2A) Prompting
- Prompt Chaining (Breaking down tasks into sequential prompts)
- Meta Prompting (Using AI to write or optimize prompts)

Module 5: Multimodal & Applied Prompting

- Multi-Modal Prompting (Text + Image/Audio inputs)
- RAG (Retrieval-Augmented Generation) Prompting
- Image Generation Model Prompting
- Video Generation Prompting

Module 6: Security & Robustness

- Adversarial Prompting.
- Prompt Injections and Jail breaking.
- Defence techniques.

- Prompt techniques for Stopping Adversarial Prompting.

Module 7: Prompt Management

- Prompt Management lifecycle.
- Different phases of prompt Management life cycle [planning, drafting, versioning, testing, storage]
- Promptmethous tool.
- Evaluation of prompts using DeepEval Library.
